Norwegian Global Emission Reduction Initiative

Call for proposals: Article 6 mitigation activities

Deadline: 20 January 2027

Norwegian Ministry of Climate and Environment

Norwegian Environment Agency

Norway is now procuring high-integrity ITMOs directly from mitigation activities in developing countries, through an open call for proposals.

The call is part of the Norwegian Global Emission Reduction (NOGER) Initiative, Norway's framework for cooperation under Article 6 of the Paris Agreement. Until now, the Initiative has purchased mitigation outcomes through bilateral cooperation and partners such as the World Bank, GGGI and the Asian Development Bank. Project developers can now offer ITMOs to Norway directly.

Who can apply

The call is open to activities under the Article 6.4 mechanism (PACM) and under Article 6.2, across most sectors. Proposals must meet these requirements:

- The activity is in a country on the OECD DAC list of ODA recipients.
- The host country can authorize the activity and apply corresponding adjustments.
- The activity can deliver at least 300,000 tCO_2e over the contract period.
- Mitigation outcomes are generated between 2027 and 2035. Delivery by 2030 is prioritized.
- No purchase agreement (MOPA) is currently in place.

Excluded activities

Oil and gas, HFC-23 destruction, N_2O abatement from adipic acid production, coal power without CCS, and forestry and other nature-based solutions, including REDD+. For forestry activities, see the Norwegian International Climate and Forest Initiative (www.nicfi.no).

How proposals are assessed

Proposals are assessed based on an overall evaluation of the criteria. No single criterion is decisive.

- Delivery certainty: project maturity, host country readiness and the proponent's experience.
- Integrity and quality: additionality, conservative baselines, robust MRV and sustainable development impacts.
- Price and commercial terms: price per ITMO, delivery and payment schedule.

Priority is given to activities using Article 6.4 methodologies and to those that apply the Article 6.4 Sustainable Development Tool. Norway also seeks a diversified portfolio across countries, sectors and technologies.

Commercial terms

Prices are quoted in USD per ITMO. Payment is made on delivery of verified and authorized ITMOs, and upfront financing is not provided. The proponent covers all costs of delivering the ITMOs. A financial model must show that ITMO revenues are essential to the project's financial viability.

How to apply

Go to www.noger.no to find the link to the application website. Proposals must be submitted by 20 January 2027. Shortlisted proponents are invited to negotiate a term sheet. This is followed by due diligence, including a site visit, and negotiation of a Mitigation Outcome Purchase Agreement (MOPA). Questions can be addressed to the Norwegian Environment Agency at CfP@miljodir.no.

The call for proposals is managed by the Norwegian Environment Agency on behalf of the Norwegian Ministry of Climate and Environment.

Find the link to the application website at www.noger.no.
