

Helse- og omsorgsdepartementet høring forslag til ny regulering av markedsføring rettet mot barn og unge av usunn mat og drikke.

Response from IASO

About IASO

The International Association for the Study of Obesity (IASO) is a not-for-profit organisation linking over 50 regional and national associations with over 10,000 professional members in scientific, medical and research organisations. It is an umbrella organisation for 53 national obesity associations, representing 56 countries, along with a policy analysis body, the International Obesity TaskForce (IOTF). The headquarters are in London, UK.

IASO is officially recognised as a non-governmental organisation by the WHO. Our mission statement is "To improve global health by promoting the understanding of obesity and weight-related diseases through scientific research and dialogue, whilst encouraging the development of effective policies for their prevention and management."

For further information see www.iaso.org and www.iotf.org

Comments on the proposed Regulations

IASO welcomes the opportunity to contribute to this consultation exercise on the proposed regulations to restrict the marketing of foods and beverages to children.

1. We support the proposed objectives and encourage the Government of Norway to implement all the proposals in full. These proposals represent a comprehensive approach to the protection of children from inducements to consume unhealthy products. The proposed regulations are consistent with the recommendations of the World Health Organization and demonstrate Norway's continuing support for the World Health Organization's processes developing and following these recommendations. Norway has provided a strong lead to the rest of the world in this respect, and the proposed regulations will provide a 'good practice' model for other member states' actions.
2. We support the age limit of 18 years in the regulations. This protects all children, consistent with the UN Convention on the Rights of the Child. It avoids the false debate about children's awareness of the intention of advertising at younger ages and focusses correctly on the effects of exposure. We suggest that a higher age limit might be considered for the actors in advertisements (e.g. include a regulation that advertisements must not include actors under age 25y).

3. We support the wide range of media being included in the proposed regulations.

We anticipate that children will be increasingly exposed to digital communications and social media and less to the traditional media, and this needs to be included in the proposed regulations.

4. We support the wide range of foods included in the proposed regulations.

However, we urge the Government of Norway to consider changing the criteria for **breakfast cereals**. In our comparison of the Norwegian proposals with other government-approved proposals, we find that the Norwegian proposals allow relatively high levels of sugar in products which can be advertised. We suggest that a level of **15 grams sugar per 100 grams of dry cereal** is reasonable, and this is the level accepted by cereal manufacturers in the Forum for Responsible Food Marketing Communication to Children (www.kodeksforfoedevarereklamer.dk) which has been operating successfully in Denmark since 2008. Our comparison of the different nutrient profiling models is attached below.

We support the proposals to ban the advertising to children of foods containing **artificial sweeteners** along with the other foods proposed. Foods with artificial sweeteners usually use similar brand names, images and logos to sugar-sweetened varieties, and the advertising of one product in the range causes a halo effect which effectively promotes all the products in the brand range. In addition, the use of artificial sweeteners should be subjected to precautionary principles on the grounds that we do not know enough about their effects on dietary and metabolic behaviour in growing children, or enough about their effects on appetite and energy balance in general (1).

We look forward with enthusiasm to the development of the proposed regulations.

Yours sincerely

A handwritten signature in black ink, appearing to read 'Tim Lobstein', with a long horizontal flourish extending to the right.

Dr Tim Lobstein
Director of Policy and Programmes

1. Conclusions of an expert meeting: "Low-Calorie Sweeteners, Appetite and Weight Control: What the Science Tells Us," held April 7–8, 2011, Washington, DC. See <http://jn.nutrition.org/content/142/6/1170S.long>

Table 3 (below) gives examples of foods attractive to children rated according to the manufacturer's own nutritional criteria, compared with their rating under several government-approved categorisation systems: the UK Ofcom regulations for TV marketing to children,¹ the Nordic Keyhole scheme for defining healthier food products,² the proposed US Inter-Agency Working Group scheme for voluntary restrictions on marketing to children,³ the Danish industry Forum Code (RFMC) and Norway's 2012 proposals for marketing restrictions.⁴ The food listed were either (i) promoted during children's television in a 2006 survey, or (ii) considered child-attractive and sold in supermarkets in spring 2012.

Table 3: Product comparisons of criteria allowing marketing
