”Høring - endringer i energiloven § 4-2”

As a partner of the NorthConnect joint venture project Vattenfall welcomes the opportunity to respond to the consultation.

As our main point, Vattenfall support the proposal to change the Energy Act § 4 2.

A regulatory framework that on a level playing field allow the development of market coupled 3rd party projects as a complement to TSO driven development is in the best interest of the end-users. It allows the commercial development of options to achieve a cost efficient realisation of the degree of interconnection that society demands.

In addition to the proposed revision of the Energy Act, a transparent and including licensing process is a key step to allow these options to be developed.

Med vänlig hälsning
