

Resumes

1 Resumes

For the contractor ErgoGroup and subcontractor Scytll with more than 3.700 employees, it is essential to emphasize the knowledge management. Intellectual property is a key factor to be a leading company in the IT-business. The proposed project team reflects this focus on competence.

1.1 *Project management*

The contractor takes the leading role in the management of the project; leaning on our methodology and experience. The focus for the project management is securing the delivery of our scope on time, with expected quality and costs.

The proposed project manager has long experience from project management and management in general, the last years from elections in Norway.

1.2 *Experience from elections in Norway and from secure eVoting-based elections*

ErgoGroup as a vendor of elections in Norway for the last 20 years, has a wide experience and competence from pVoting. The competence cover all election phases for all types of Norwegian elections, including training of local election committees. Some of our key consultant election experts will join the project team.

Scytll as a worldwide leader in research, development and implementation of highly secure solutions for electoral modernization, will join the project team with experienced consultants. The consultants have experience from eVoting projects worldwide.

1.3 *Design, development and testing*

The contractor's delivery method serves as a vehicle to deliver the project results, through a unique combination of system implementation and integration, using well recognized methods and principles. Our experience has proved that this can be applied for election solutions as well. All project team members adapt to this methodology. As a leading system integrator with secure business critical solutions, our software engineers have broad experience from systems development.

2 Proposed project team

Below our proposed project team is presented by name and role in the project. The team cover all project phases, including testing. The election experts will participate in the test phase as well as in the early phases of analysis and specification. See attached CV's.
