

Trebyggeri gir god samvittighet

Oslo 3 juni 2009
prof. Magnus Silfverhielm

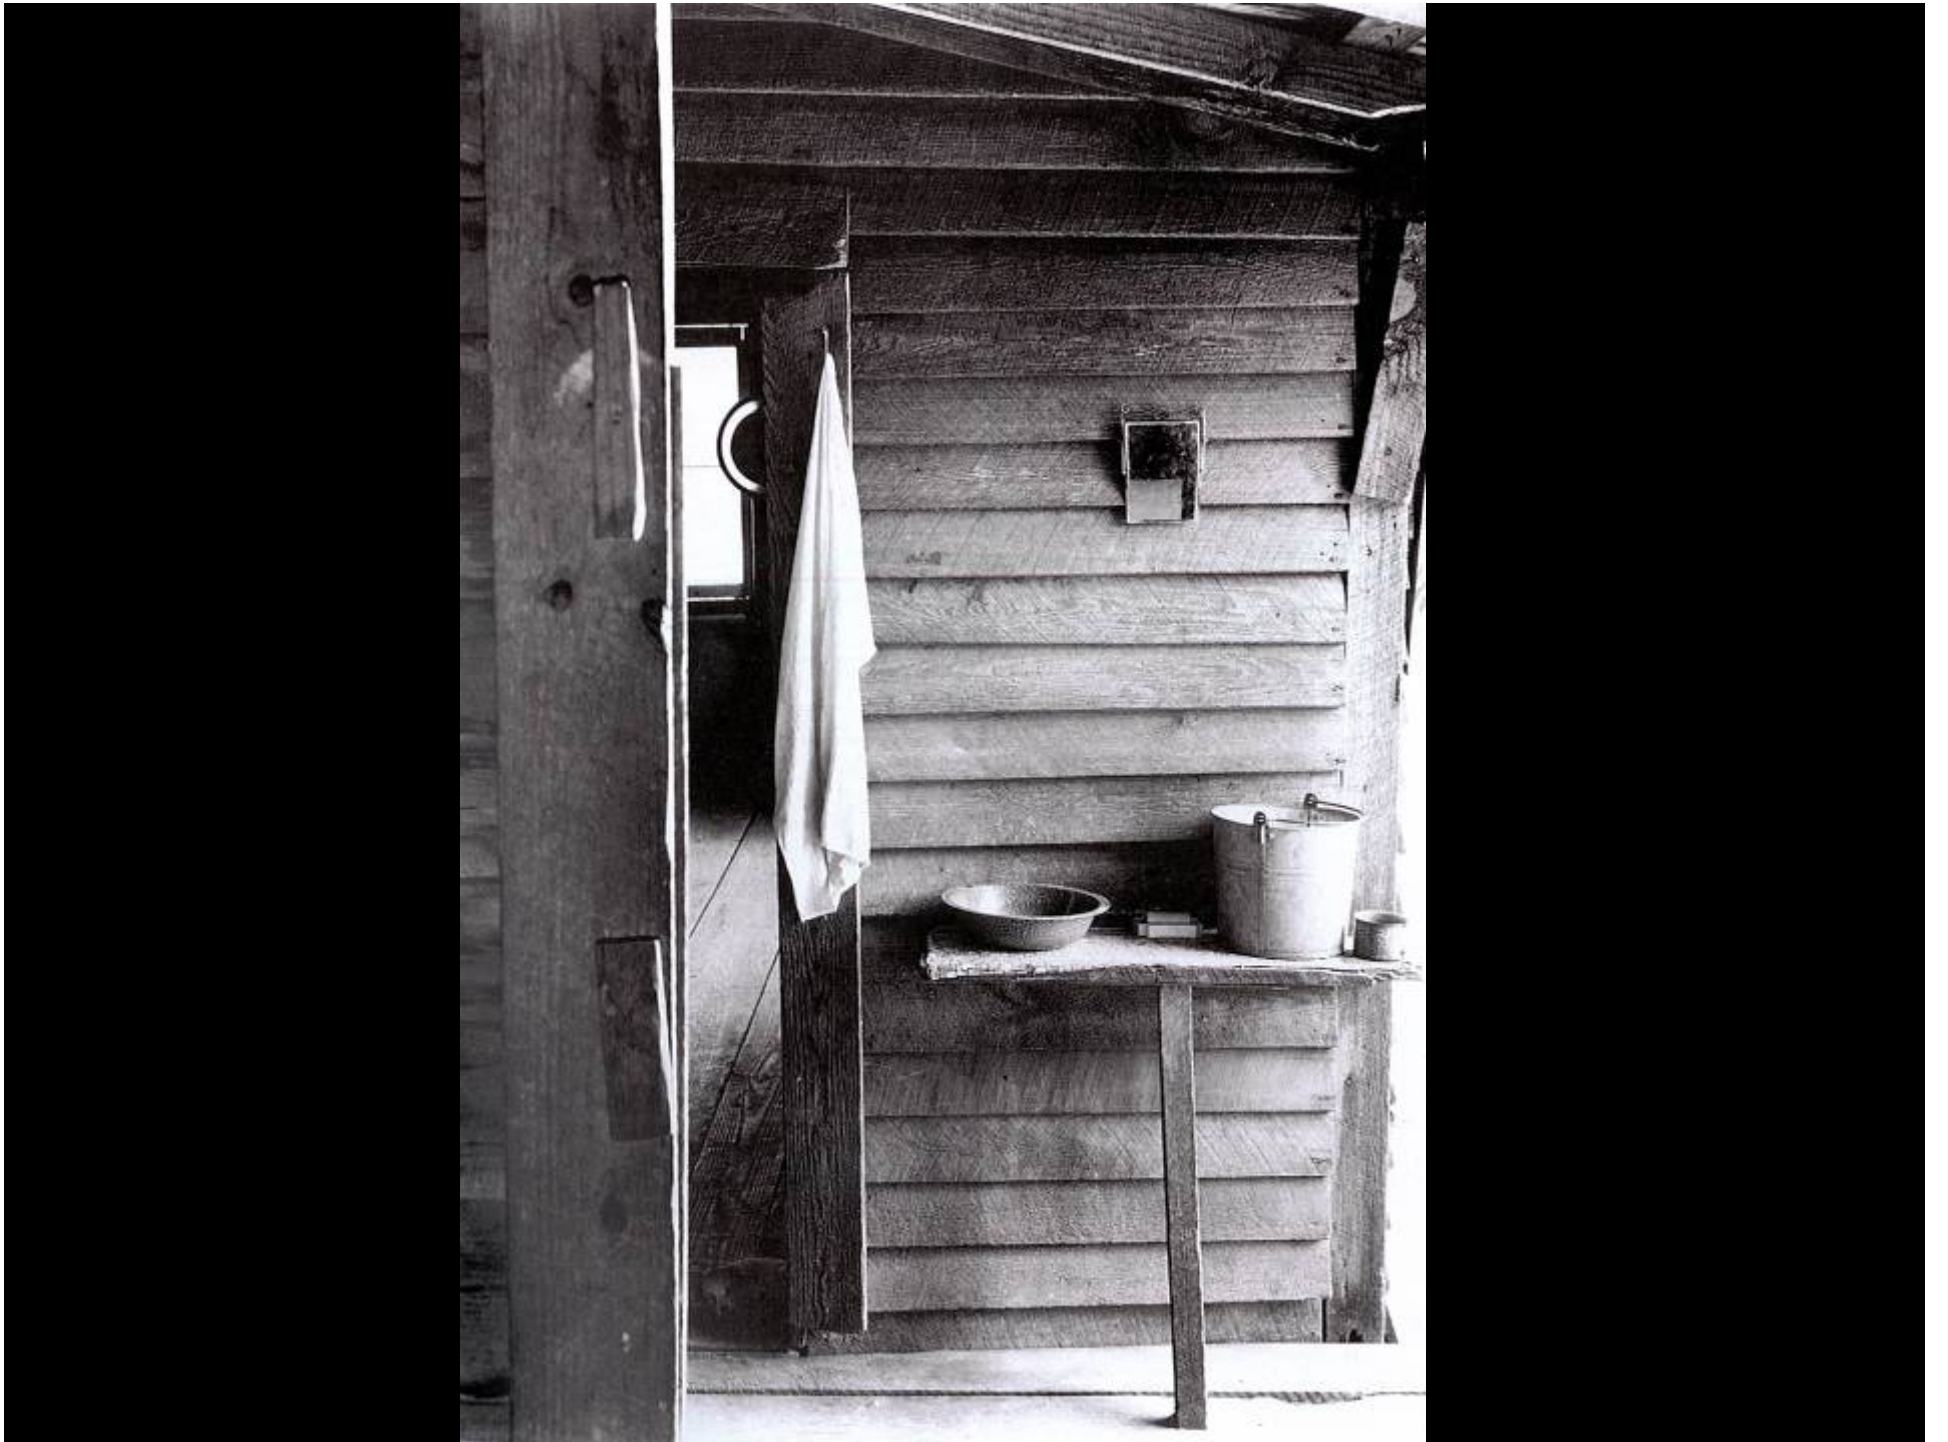

Civilisationens vagga byggdes av trä

VÄXANDE BETYDELSE Trä var mänsklighetens naturliga materialval i 400 000 år. I samband med den industriella revolutionen på 1800-talet fick stål, plast och betong större betydelse. Men teknikutvecklingen, och klimatkrisen, bidrar till att vi nu söker oss tillbaka till rötterna.
