Norway's National Allocation Plan for the emissions trading system in 2008-2012 – comments from StatoilHydro

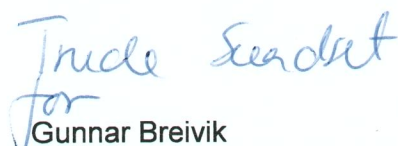

Reference is made to the draft Norwegian National Allocation Plan (NAP), which was published for public consultation by the Ministry of the Environment on 21 December 2007 with a deadline for comments today.

StatoilHydro have participated in the development of the comments from The Confederation of Norwegian Enterprise (NHO) and Norsk Industri, and support these.

StatoilHydro also refers to Statoil's reply of April 16, 2007 in the public consultation of the 2007 amendments to the Norwegian Greenhouse Gas Emission Trading Act of 17 December 2004.

StatoilHydro will express support for the government's cooperation with member states and institutions within EU to establish the necessary framework for inclusion of projects for CO2 capture and storage in the emission trading system and that Norway will seek to include such projects for the period 2008-2012 based on the directive's article 24.

Best regards
